### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Douglas E. Erickson on 01/26/2006.

The application has been amended as follows:

**In the claims:**

**Claim 11:** Rewritten as below:

-- 11. A printhead alignment test pattern comprising a plurality of printhead-alignment-test-pattern spaced-apart printed images at least partially aligned substantially along an axis, wherein each image includes leading and trailing edge portions having respective image-outermost leading and trailing edges spaced apart along the axis and includes an intervening portion disposed between the leading and trailing edge portions, wherein the leading and trailing edge portions have a higher print density than the intervening portion, and wherein each of the leading and trailing edge portions of one of the images has a print density in the range of substantially 75% to substantially 100% and the intervening portion of the one image has a print density in the range of substantially 25% to substantially 50%. --

**Claim 15:** Cancelled.

**Claim 16:** On first line, replaced "15" by --11--.

### REASONS FOR ALLOWANCE

Art Unit: 2853

The following is an examiner's statement of reasons for allowance:

**Regarding to claims 10, 20:** The reasons for allowance was indicated in the office action dated 10/14/2005.

**Regarding to claim 11:** The claim is amended to incorporate the allowed feature of the original claim 15, as indicated in the office action dated 10/14/2005.

**Regarding to claim 1:** In light of the applicant's argument, the examiner admits that Ikeda's FIG. 5 does not teach "*a plurality of space-apart images at least partially aligned substantially along a printhead scan axis*", which is parallel to the "reading direction", wherein "*each image includes leading and trailing edge portions having respective image-outermost leading and trailing edges spaced apart along the printhead scan axis and includes an intervening portion disposed between the leading and trailing edge portions*". Ikeda's FIG. 6, even though, teaches "*a plurality of space-apart images at least partially aligned substantially along a printhead scan axis*", which is orthogonal to the "reading direction", but does not teach "*moving a sensor along the printhead scan axis over the plurality of images*", (the sensor, instead, moves in the "READING DIRECTION", which is orthogonal to the printhead/main scanning direction as shown in FIG. 1). Furthermore, Ikeda's test pattern in FIG. 6 is arranged for the purpose of detecting the distance from image a-ref3 to each image a-V, b-V, c-V, and d-V, so if the sensor is modified to scan the images along the printhead scan axis (as in FIG. 5), Ikeda's intended purpose would not be obtained. As a result, Ikeda's either FIG. 5 or FIG.6, alone or in combination, does not teach all claim elements cited in claim 1.

Claims 2-9, 12-14, and 16-19 are allowed because they depend directly/indirectly on claim 1 or 11.

Art Unit: 2853

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
